

Treats Pigmentation,
Skin Irregularities and the
Signs of Aging.

A New You. No Downtime.

How Resolve Works

a. Pigmentation before Resolve treatment

b. Resolve technology shatters the pigment into miniscule particles that can easily be removed by the body.

PicoWay®
Resolve™ Picosecond Holographic Fractional

PicoWay® Resolve™ Treats Pigmentation, Skin Irregularities and the Signs of Aging

Take care of the minor imperfections and restore your skin to its youthfulness with PicoWay Resolve. Resolve is a new fractional treatment capability on the advanced PicoWay laser device for benign pigmented lesions such as freckles, age spots, lentigines, Nevus of Ota, Café-au-lait and more.

This breakthrough technology uses the shortest laser pulse available measured in picoseconds (trillionths of a second) to breakdown the pigment into the smallest particles. These pulses treat pigmentation, skin irregularities and the signs of aging. Why wait any longer?

The PicoWay Resolve Difference

How it works

PicoWay's ultra-short pulses also optimize the delivery of energy to the targeted pigmented particles, ensuring

that the pigmentation is effectively treated, while the least amount of heat gets transferred into the skin.

Fast results

With its ultra-fast delivery of concentrated high-power energy, PicoWay will shatter even tiny pigmented particles, making it easier for the body to clear the pigmentation.

Why is fractional important?

Fractional treatments mean that only a fraction of the skin is affected, leaving healthy skin around the treated area to promote quick healing.

Treatment made easy

PicoWay offers better results in few treatments for various skin types.

No downtime

PicoWay is simple to fit into your life. After a treatment, you can get right back to your busy day. Since each treatment typically lasts for less than 20 minutes, you can easily schedule an appointment during your lunch break.

Why Resolve™ treatments?

- Offers a unique treatment for the signs of aging and skin irregularities.
- Treats a range of pigmented lesions.
- Results visible in just a few treatments.
- No downtime, really.
