

BOOSTERS

SKIN BOOSTERS

(HYDRATING MICROINJECTIONS) PERFORMED BY COSMETIC DOCTOR

This treatment involves a series of hydrating, collagen stimulating microinjections of dermal fillers to the skin. These substances occur naturally in the body and absorb water for long lasting hydration underneath the skin. Skin boosters also activate fibroblasts promoting new collagen and elastin formation. The result is improved firmness, elasticity, smoothness and hydrated skin.

A typical treatment program with skin boosters is made up of three initial treatment sessions 2 to 4 weeks apart. The initial 3-treatment program is done once, and after that one treatment about every 6 months is recommended to keep your skin looking radiant and rejuvenated.

Treatment areas include face, hands décolletage and neck

PER ADDITIONAL ML	\$380
PER TREATMENT (<i>full face</i>) (<i>full face is typically 2ml</i>)	\$650
COURSE OF 3 TREATMENTS (<i>full face</i>) (<i>recommended, approximately 6ml</i>)	\$1,800

COMBINING SKIN BOOSTERS & SKIN LASER TREATMENTS

Combining skin boosters with device based treatments such as lasers is a very effective skin rejuvenation regimen. We recommend combining Skin Boosters and PicoWay Resolve for best results.

Skin boosters and laser skin treatments must be performed separately 2-4 weeks apart.

PICOWAY RESOLVE + SKIN BOOSTER CYCLIC TREATMENTS

A very popular rejuvenation treatment is a combination of PicoWay Resolve Laser alternating with skin boosters in a 2-4 week rotating cycle. This treats fine lines, wrinkles, skin laxity, pigment improving the skins clarity and adds hydration to plump the skin. A course of 3 treatments is needed to see great results. A Vamp Staff favourite!

SKIN BOOSTERS + PICOWAY RESOLVE

PER TREATMENT (<i>full face</i>)	\$990
COURSE OF 3 TREATMENTS (<i>recommended</i>)	\$2700

SILHOUETTE SOFT THREADS

Silhouette soft threads is an innovative procedure that uses resorbable sutures to reposition and tighten tissue laxity in the facial and neck area. The treatment involves two processes; immediate and discreet repositioning of the tissue via absorbable sutures, and gradual (8-12 weeks) regeneration of collagen stimulated by the threads poly L-lactic acid (PLLA) coating. The production of new collagen works to soften the skin and hold the tissue in place after the thread is absorbed by the surrounding tissue.

DOCTOR'S CONSULTATION Complimentary

*Pricing is on consultation and depends on how many threads are placed.
As a guide pricing starts from \$1800*
