Gentle Pro™
LASER TREATMENT

Facial and leg veins and facial redness develop with age

- ✔ Rosacea affects over 16 million men and women in the US alone*
- ✔ Tiny blood vessels widen and cause thread-like lines just under the skin – often in patches
- ✔ Spider veins affect more than half of all women¹ and are most visible on the legs and the face
- ✔ Sometimes skin redness may be hormone sensitive and becomes more obvious during puberty, pregnancy and menopause

Gentle Pro™ lasers reduce the appearance of vascular lesions¹

Fast, efficient, non-invasive

Gentle Pro™ devices incorporate state-of-the-art technology which delivers short pulses of light energy into the skin. The light pulses target and destroy problematic blood vessels, thereby eliminating the unwanted surface vein or vascular lesion. Before and after each laser pulse, the Gentle Pro™ device delivers a liquid coolant onto the skin, protecting the surrounding tissue. This cooling system can be adjusted to your individual needs.

Gentle Pro™ lasers are a world recognized leader in laser hair removal and also treat a myriad of other skin conditions including leg and facial veins. Ask your provider if Gentle Pro™ treatments are right for your needs.

Highly rated by patients² and trusted by dermatologists³ worldwide

What you can expect

- 1 The number of treatment sessions required varies from patient to patient – many lesions will clear after just one treatment.
- 2 The duration of each session will depend upon your individual needs.
- 3 The Gentle Pro™ lasers have a unique, integral skin cooling system, so most patients find Gentle Pro™ treatments extremely tolerable. Some people experience a sensation similar to having an elastic band snapped against the skin during treatment.
- 4 You will be able to resume normal activities after each session, but you may be given specific advice, such as avoiding sun or abrasive skin cleansers on treated skin for a few days.
- 5 After the treatment, a cool compress or gel pack may be applied. If you do have any redness or swelling after treatment, this should resolve in a couple of hours. Permanent side effects are rare but should be discussed with your practitioner
- 6 You should always follow specific instructions from your healthcare provider.
